Perfect 🖐 you've listed the **business process flow** of your *Pet Rescue & Rehome Management System*. Based on this, I can map it into a **clear system structure** that shows how your website/application should be designed (functions, modules, and layouts).

---

# 🐾 System Workflow (Based on Business Process)

## 1. Pet Rescue and Intake

- **Actor**: Staff / Volunteer
- **System Features**:
  - Add rescued pet details (unique ID, location, condition).
  - Upload photo and notes.
  - Assign staff/volunteer to transport.

---

## 2. Medical Assessment and Treatment

- **Actor**: Vet Staff
- **System Features**:
  - Record health check results.
  - Log vaccinations, treatments, surgeries.
  - Update pet's health profile.

---

## 3. Pet Profiling

- **Actor**: Admin / Staff
- **System Features**:
  - Enter pet's breed, age, gender, behavior.
  - Upload multiple photos/videos.
  - Mark pet as ready for adoption or foster.

---

## 4. Temporary Care or Fostering

- **Actor**: Staff / Volunteers
- **System Features**:
  - Assign pet to a foster caregiver.
  - Record foster details (name, address, duration).
  - Track when foster ends and pet returns.

---

## 5. Listing for Adoption

- **Actor**: System (auto) + Admin approval
- **System Features**:
  - Display adoptable pets on client portal.
  - Search and filter by breed, age, size, health.
  - Show pet's story + adoption button.

---

## 6. Adoption Application Process

- **Actor**: Client (Adopter)
- **System Features**:
  - Online application form (contact info, preferences).
  - Store application in database.
  - Notify staff/admin.

---

## 7. Adopter Screening

- **Actor**: Admin / Staff
- **System Features**:
  - Review applications.
  - Update status (pending, approved, rejected).
  - Schedule interview/home visit.

---

## 8. Approval and Matching

- **Actor**: Admin / Staff
- **System Features**:
  - Match adopter with pet based on screening.
  - Confirm meeting date/time.
  - Notify adopter via email/SMS.

---

## 9. Adoption Finalization

- **Actor**: Admin / Client
- **System Features**:

    - Generate and sign adoption documents.
    - Process payment/donation (if applicable).
    - Update pet status → “Adopted.”

---

### 10. Post-Adoption Follow-up

- **Actor**: Staff / Client
- **System Features**:
    - Send reminders for vet checkups.
    - Collect adopter feedback.
    - Allow adopters to share pet updates/photos.

---

### 11. Reporting and Analytics

- **Actor**: Admin
- **System Features**:
    - Track number of rescues, fosters, adoptions.
    - Generate charts on adoption success rate.
    - Monitor health/treatment statistics.
    - Identify areas for improvement.

---

## 🎯 System Layout Mapping (Role-Based)

### 👔 Admin Dashboard

- Manage Pets (Rescue, Profile, Adoption Status).
- Manage Users (Staff, Volunteers, Clients).
- View Adoption Applications.
- Reports & Analytics.

### □💲 Staff/Vet Dashboard

- Rescue Intake & Transport.
- Medical Assessments.
- Foster Assignments.
- Adoption Screening.

### 👤👥👪 Client (Adopter Portal)

- Browse Adoptable Pets (search, filter).
- Submit Adoption Application.
- Track Application Status.
- Post-Adoption Feedback.

### 🙋 Volunteer Dashboard

- Rescue Reporting.
- Foster Care Updates.
- Event Participation.

---

⚡ So basically, this business process becomes the **blueprint** for your system.

- **Admin layout** → management, reports, approvals.
- **User layout** → simple, emotional, and task-focused (adopting, volunteering, fostering).

---

👉 Would you like me to now **draw this workflow as a diagram (flowchart)** so you can visually see how pets move through rescue → adoption → post-adoption in the system?
